App Name - Spotify Song Recommender

App Description

Our program accesses the Spotify API to show statistics about Spotify user's listening. It will show things such as their favorite songs, favorite artists, and other interesting information.

We will implement our program by using the Spotify API, which allows you to access user's artists, genres and playlist activity. We can use this information to create a website that shows cool info about one's listening activity.

Vision Statement

Reveal unique information about avid music fan's listening activity.

VersionControl/GitHub

<https://github.com/LachlanMurphy/SpotifyWrap-Team014-2>

Team Communication

Our team communicates both over text, voice chat, and scheduled in-person meetups.

Methodology

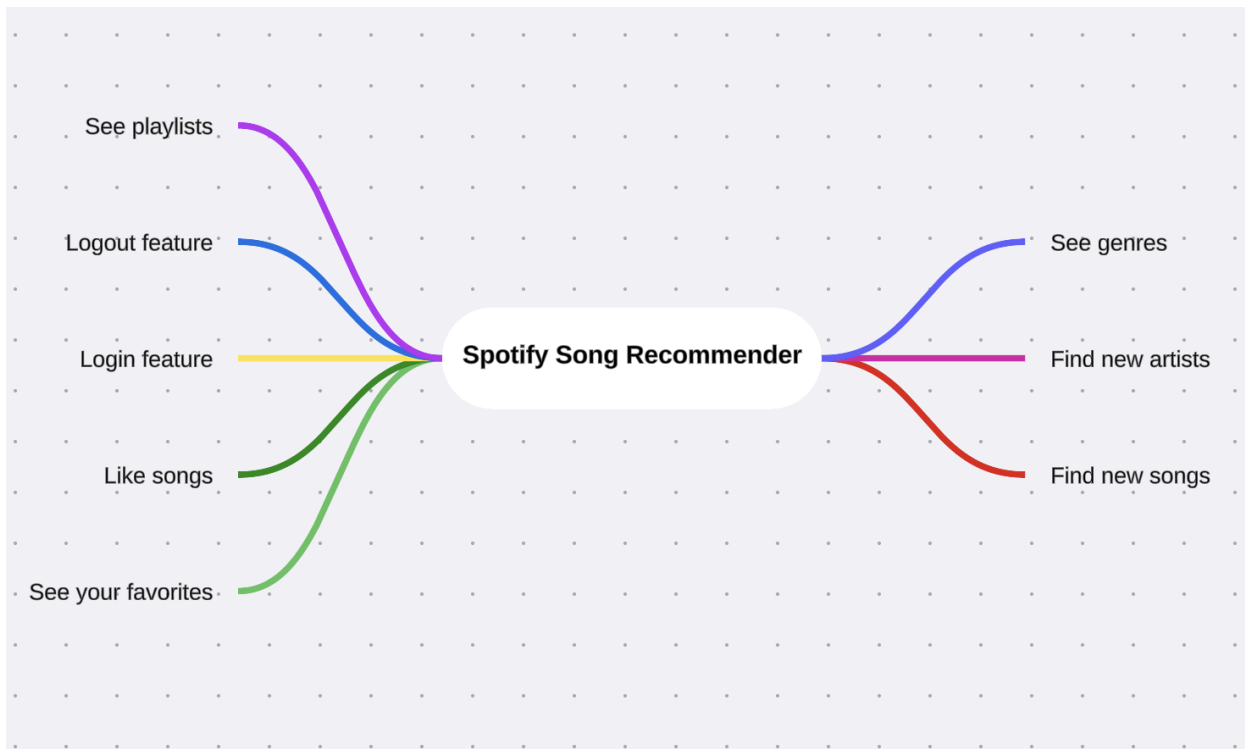

We will be using Agile methodology to develop our project. Specifically, we will do week-long 'sprints' and then touch down with our TA, as well as reconvening twice a week.

Team Meetups

We meet Tuesdays at 3pm with our TA.

We also meet as a group on Thursdays at 2pm and Sundays at 1pm
